Hardware provision  
Project management  
Custom development

## AcuityWTE – Web Time and Expenses

AcuityWTE enables businesses to allow remote users to input their time and expenses in base or foreign currency against projects in Sage PA. The system has user administration to restrict users to only input time and expenses against projects they are permitted to see, therefore allowing subcontractors on specific projects to utilise it, without full visibility.

The administration also holds contractual hours to assist users to know what time is not fully or partially allocated for a day. The home page uses a web calendar control to give a quick view of outstanding input. Built-in authorisation via email exists for expense and TS authorisation.

### Features and Benefits:

- Visibility of all time and expenses (T&E)
- Foreign currency
- Manager authorisation for all T&E
- Web-based for remote workers to update Sage PA
- New web dashboard for status of costs and performance of projects
- Subcontractors can input T&E and post to P/L via authorisation
- Controlled input of time against contractual hours
- Foreign currency expenses
- Administrator control of visible projects
- Timesheet and e-authorisation process
- Browser-based, remote users don't need client for Sage 200
- User home page with outstanding submissions
- Control on projects visible to user
- Integrates with Sage 200 project accounting
